## Incoming student mobility

## Name of UNIOS University Unit: DEPARTMENT OF MATHEMATICS

COURSES OFFERED IN FOREIGN LANGUAGE FOR ERASMUS+ INDIVIDUAL INCOMING STUDENTS

| Department or Chair within the <br> UNIOS Unit | Department of Mathematics |
| :--- | :--- |

| Study program | - Undergraduate university study programme in Mathematics <br> and Computer Science |
| :--- | :--- |
|  | - Undergraduate university study programme in Mathematics |

| Study level | Undergraduate (Bachelor) |
| :--- | :--- |

| Course title | Data Structures and Algorithms I |
| :---: | :---: |
| Course code | 1053 |
| Language of instruction | English |
| Brief course description | Syllabus. <br> 1. Introduction. Basic terms and definitions. Design and analysis of algorithms. Example: Insertion sort and Merge sort. <br> 2. Asymptotic notation. Recurrences. The substitution method for solving recurrences. The recursion-tree method for solving recurrences. The master method for solving recurrences. <br> 3. Divide-and-Conquer. Binary search. The algorithm for efficient exponentiation. Strassen's algorithm for matrix multiplication. <br> 4. Randomized algorithms. <br> 5. Sorting algorithms and Order Statistics. Bubble sort. Heapsort. Quicksort. A randomized version of quick sort. Sorting in linear time. Order statistics. <br> 6. Elementary Data Structures. Stacks and queues. Linked lists. Trees. Hash tables and associative arrays. <br> 7. Binary Search Trees. Querying a binary search tree. Insertion and deletion. <br> 8. Priority Queues. <br> 9. Greedy Algorithms. Elements of greedy strategy. Applications in different computational problems. <br> 10. Dynamic Programming. Elements of dynamic programming. Applications in different computational problems. <br> 11. Amortized Analysis. |

| Form of teaching | Consultative teaching. |
| :--- | :--- |
| Form of assessment | Lectures contain a deep and systematic overview of elementary data <br> structures and algorithms. During exercises students are expected to <br> solve given programming problems by using acquired knowledge. <br> The correctness and time and space complexity of implemented <br> algorithms are the most important elements. At the end of each <br> practice session students individually solve short quizzes. During the <br> semester, students solve homework assignments that contain <br> programming problems. The assessment of theoretical knowledge is <br> done by written examinations. If students achieve satisfactory results <br> in homework and written exams, they are not obliged to take final <br> written and oral exams. |
| Number of ECTS | $\mathbf{7}$ |
| Class hours per week | $\mathbf{3 + 2 + 0}$ |
| Minimum number of students | Winter semester |
| Period of realization | Domagoj Matijević |
| Lecturer | Wrat\| |
